If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

DETAILED ACTION

1. This Office Action is responsive to the Amendment filed on 11/6/07. Accordingly, claims 2-6 and 8-20 are currently pending; and claims 1, 7 and 21 are canceled.

REASONS FOR ALLOWANCE

2. Claims 2-6 and 8-20 are allowed.
3. The following is an examiner's statement of reasons for allowance:

-Regarding independent claim 2, none of prior art of record teaches or suggests a charge pump circuit comprising: a charge pump core circuit that outputs a control voltage, said charge pump core circuit including first switching elements; and a replica circuit, wherein the replica circuit receives the control voltage and produces a bias signal to minimize the difference between charge up and charge down currents generated by the charge pump core circuit and wherein said replica circuit includes second switching elements configured such that said first switching elements and said second switching elements operate with substantially identical switching characteristics.

-Regarding independent claim 6, none of prior art of record teaches or suggests a method comprising: generating an output control voltage at a charge pump core circuit; generating a bias signal based on the control voltage, wherein said generating the bias signal includes receiving the control voltage to output a version of the control voltage and using the version of the control voltage to create, at a replica circuit, the bias signal; and adjusting the operation of the core circuit based on the bias signal so as to minimize a difference between charge up and charge down currents.

Art Unit: 2611

-Regarding independent claim 9, none of prior art of record teaches or suggests a charge pump circuit comprising: a charge pump core circuit means for outputting a control voltage, said charge pump core circuit means including first switching elements; and a replica circuit means for receiving the control voltage and producing a bias signal to minimize the difference between charge up and charge down currents generated by the charge pump core circuit means, said replica circuit means including second switching elements wherein substantially identical switching characteristics characterize operation of said first switching elements and said second switching elements.

-Regarding independent claim 17, none of prior art of record teaches or suggests a charge pump circuit comprising: a charge pump core circuit outputting a control voltage wherein said charge pump core circuit includes a switching circuit; a buffer circuit coupled to said charge pump core circuit to buffer said control voltage; a replica circuit matching said charge pump core circuit for receiving the buffered control voltage and producing a bias signal; and an amplifier for generating a signal to minimize the difference between charge up and charge down currents.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
